Experiment Name: Mobile Network Protocol Stacks Using Figma

Aim:

To design a visual representation of mobile network protocol stacks using Figma, highlighting the different layers and their functions in mobile communication.

Procedure:

1. Open Figma and create a new design frame.

2. Add the title "Mobile Network Protocol Stacks".

3. Create five coloured rectangles representing Application, Transport, Network, Data Link and Physical layers.

4. Add suitable symbols and brief descriptions for each layer.

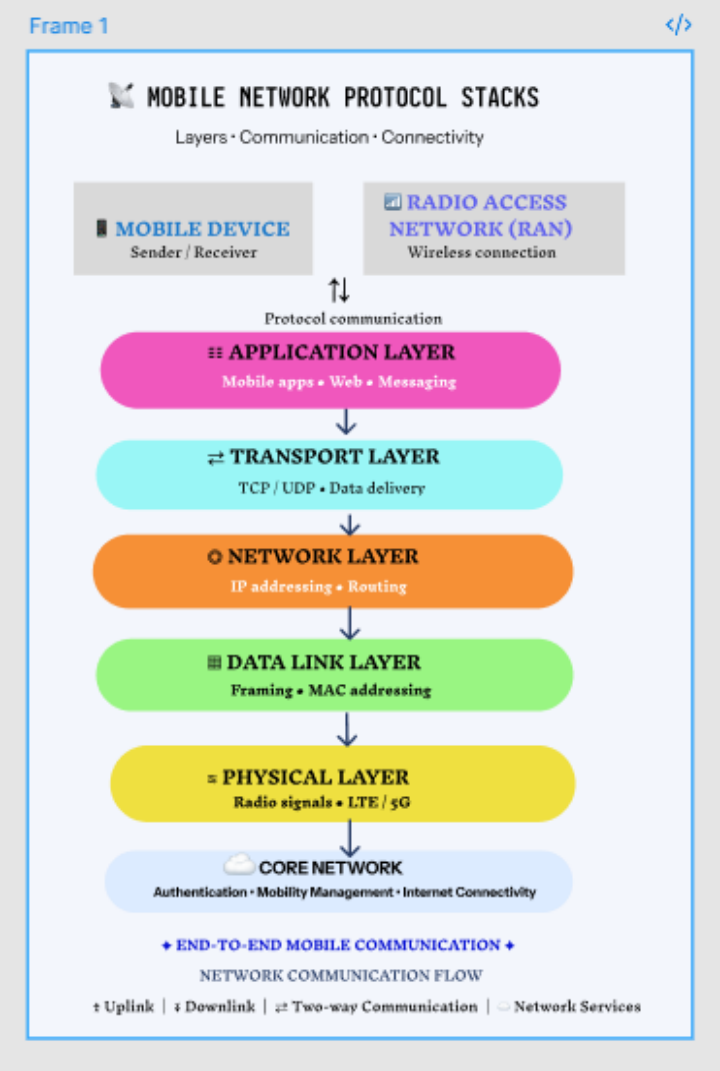

5. Include Mobile Device, Radio Access Network and Core Network components.

6. Connect the layers using arrows to represent communication flow.

7. Add a legend and arrange all elements neatly.

8. Preview and save the completed design.

Screenshot:

Result:

Successfully designed a colourful and professional visual representation of mobile network protocol stacks using Figma, illustrating the key layers and their roles in mobile communication.
