Experiment Name: Mobile Network Handoff Using Figma

Aim:

To simulate and visualize the handoff process in a mobile network using Figma, demonstrating seamless connectivity when a mobile user moves between cell towers.

Procedure:

1. Open Figma and create a new design frame.

2. Add the title "Mobile Network Handoff".

3. Create two coloured boxes representing Cell Tower A (Source) and Cell Tower B (Target).

4. Add a mobile user symbol between the two towers.

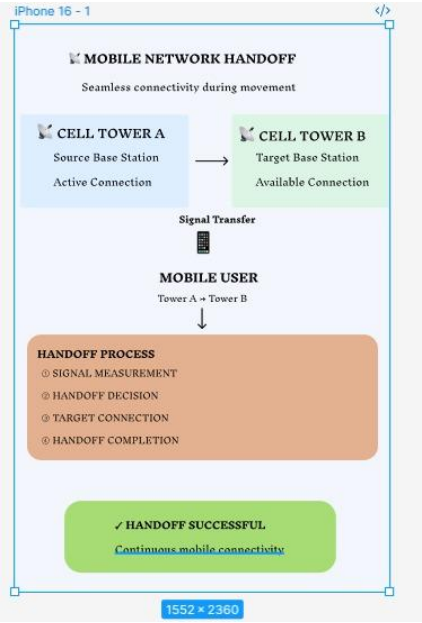

5. Draw an arrow from Tower A to Tower B to represent signal transfer.

6. Create four stages: Signal Measurement, Handoff Decision, Target Connection and Handoff Completion.

7. Add a successful handoff message at the bottom.

8. Arrange the elements neatly and preview the completed design.

Screenshot:

Result:

Successfully simulated and visualized the mobile network handoff process using Figma, demonstrating how a mobile connection transfers between two cell towers while maintaining continuous connectivity.
